## **COMMANDER RESOURCES LTD.**

(An Exploration Stage Company)

Notes to Interim Financial Statements

For the Periods Ended September 30, 2010 and 2009

(Unaudited)

(expressed in Canadian dollars)

---

### **1. Nature of Operations and Going Concern**

Commander Resources Ltd. (the "Company") is in the process of actively exploring and developing its mineral properties and has not yet determined whether these properties contain mineral resources that are economically recoverable. The Company has not earned significant revenues from its resource property interests and is considered to be in the exploration stage.

The Company's financial statements have been prepared on a going concern basis, which presumes that the Company will be able to realize its assets and discharge its liabilities in the normal course of business for the foreseeable future.

The business of mining exploration involves a high degree of risk and there is no assurance that current exploration projects will result in future profitable mining operations. The Company has no source of revenue, and has significant cash requirements to meet its administrative overhead, pay its debts and liabilities, and maintain its mineral interest. The ability of the Company to continue as a going concern and meet its commitments as they become due, including the acquisition, exploration and development of mineral properties, is dependent on the Company's ability to obtain the necessary financing. Management is planning to raise additional capital to finance operations and continue to explore mineral property interests. There is no assurance that these plans will be successful.

For the nine months ended September 30, 2010, the Company reported a net loss of \$1,223,603 (2009 - \$427,407), has a deficit of \$17,541,375 (2009 - \$16,317,772) and accumulated other comprehensive loss of \$295,519 (2009 - \$334,419). The Company also had working capital of \$1,633,519 (2009 - \$2,028,671). Although the Company has been successful at raising funds in the past through the issuance of share capital, it is uncertain whether it will be able to continue this financing due to uncertain economic conditions.

### **2. Significant Accounting Policies**

These financial statements have been prepared by the Company in accordance with Canadian generally accepted accounting principles ("GAAP") and are presented in Canadian dollars.

#### **(a) Basis of presentation**

These unaudited interim financial statements have been prepared in accordance with generally accepted accounting principles ("GAAP") in Canada. They do not include all of the information and disclosures required by Canadian GAAP for annual financial statements. In the opinion of management, all adjustments considered necessary for fair presentation have been included in these financial statements. The unaudited interim financial statements should be read in conjunction with Commander's audited financial statements including the notes thereto for the year ended December 31, 2009.

The accounting policies followed by Commander are set out in Note 2 to the audited financial statements for the year ended December 31, 2009 and have been consistently followed in the preparation of these unaudited interim financial statements.

## **COMMANDER RESOURCES LTD.**

(An Exploration Stage Company)

Notes to Interim Financial Statements

For the Periods Ended September 30, 2010 and 2009

(Unaudited)

(expressed in Canadian dollars)

---

### **2. Significant Accounting Policies (continued)**

#### **(b) Future accounting changes**

##### **(i) International Financial Reporting Standards (“IFRS”)**

In February 2008, the Canadian Accounting Standards Board (“AcSB”) confirmed that Canadian GAAP for publicly accountable enterprises will be converged with IFRS effective for fiscal years beginning on or after January 1, 2011. The Company will therefore be required to report using IFRS commencing with its unaudited interim consolidated financial statements for the three months ended March 31, 2011, which must include the interim results for the prior period ended March 31, 2010 prepared on the same basis. IFRS uses a conceptual framework similar to Canadian GAAP, but there are some significant differences on recognition, measurement and disclosures. While the Company has begun assessing the adoption of IFRS, the financial reporting impact of the transition to IFRS cannot be reasonably estimated at this time.

##### **(ii) Business Combinations**

In January 2009, the CICA issued Section 1582, “Business Combinations”, Section 1601, “Consolidated Financial Statements”, and Section 1602, “Non-Controlling Interests”. These sections replace the former Section 1581, “Business Combinations”, and Section 1600, “Consolidated Financial Statements”, and establish a new section for accounting for a non-controlling interest in a subsidiary.

Sections 1582 and 1602 will require net assets, non-controlling interests and goodwill acquired in a business combination to be recorded at fair value and non-controlling interests will be reported as a component of equity. In addition, the definition of a business is expanded and is described as an integrated set of activities and assets that are capable of being managed to provide a return to investors or economic benefits to owners. Acquisition costs are not part of the consideration and are to be expensed when incurred. Section 1601 establishes standards for the preparation of consolidated financial statements.

These new sections apply to interim and annual financial statements relating to fiscal years beginning on or after January 1, 2011. Earlier adoption of these sections is permitted as of the beginning of a fiscal year. All three sections must be adopted concurrently. There is no impact to the Company after the adoption of these sections.

### **3. Financial Instruments**

#### **(a) Fair value**

The Company has classified its financial instruments as follows:

- Cash and cash equivalents – as held-for-trading
- Marketable securities – as available-for-sale
- Accounts receivable – as loans and receivables
- Due from related parties – as loans and receivables
- Investment in warrants – as held-for-trading
- Accounts payable and accrued liabilities – as other financial liabilities.

The carrying values of cash and cash equivalents, accounts receivable, and accounts payable and accrued liabilities approximate their fair values because of the short term to maturity of these financial instruments.

The fair values of amounts due from related parties cannot be reliably measured since there is no quoted price for such instruments.

## COMMANDER RESOURCES LTD.

(An Exploration Stage Company)

Notes to Interim Financial Statements

For the Periods Ended September 30, 2010 and 2009

(Unaudited)

(expressed in Canadian dollars)

---

### 3. Financial Instruments (continued)

#### (a) Fair value (continued)

The Company classifies its financial instruments measured at fair value at one of three levels according to the relative reliability of the inputs used to estimate the fair value:

Level 1 – quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e., as prices) or indirectly (i.e., derived from prices); and

Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The following table summarizes fair value measurement by level at September 30, 2010 for assets and liabilities measured at fair value on a recurring basis:

	Total	Level 1	Level 2	Level 3
Assets				
Marketable securities	\$ 363,965	\$ 363,965	\$ -	\$ -
Investment in warrants	\$ 33,043	\$ -	\$ 33,043	\$ -

As the carrying values of the Company's remaining financial instruments approximate their fair values, disclosure is not made of their level in the fair value hierarchy.

#### (b) Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty satisfying financial obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has cash and cash equivalents at September 30, 2010 in the amount of \$874,158. Of this amount, \$314,664 relates to advances from AngloGold to be used in the Baffin properties (see Note 7). At September 30, 2010, the Company had accounts payable and accrued liabilities of \$400,963. All of the Company's current liabilities are due within the current fiscal year.

#### (c) Credit risk

Credit risk is the risk that a counter party to a financial instrument will fail to discharge its contractual obligations. The Company is exposed to credit risk with respect to its cash and cash equivalents and amounts due from related parties. This risk is minimized as the cash and cash equivalents have been placed with major Canadian financial institutions. The Company is exposed to credit risk on its receivables. Credit risk with respect to amounts due from related parties has been assessed as low by management as the Company has strong working relationships with the parties involved.

**COMMANDER RESOURCES LTD.**

(An Exploration Stage Company)

Notes to Interim Financial Statements

For the Periods Ended September 30, 2010 and 2009

(Unaudited)

(expressed in Canadian dollars)

**3. Financial Instruments** (continued)**(c) Credit risk** (continued)

Concentration of credit risk exists with respect to the Company's cash and cash equivalents as all amounts are held at major Canadian financial institutions. The Company's concentration of credit risk and maximum exposure thereto is as follows:

	<b>September 30, 2010</b>	<b>December 31, 2009</b>
Cash	\$ 859,158	\$ 1,410,152
Term deposit with interest 0.5% (2009 - 0.2%) maturing on July 23, 2011	15,000	15,000
	<b>\$ 874,158</b>	<b>\$ 1,425,152</b>

**(d) Market risk**

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, foreign currency risk and other price risk.

**(i) Interest rate risk**

Interest rate risk consists of two components:

- (a) To the extent that payments made or received on the Company's monetary assets and liabilities are affected by changes in the prevailing market interest rates, the Company is exposed to interest rate cash flow risk.
- (b) To the extent that changes in prevailing market rates differ from the interest rate in the Company's monetary assets and liabilities, the Company is exposed to interest rate price risk.

The Company's cash and cash equivalents consists of cash held in bank accounts and a guaranteed investment certificate that earns interest at 0.5%. Due to the short-term nature of these financial instruments, fluctuations in market rates do not have a significant impact on estimated fair values as of September 30, 2010.

Future cash flows from interest income on cash and cash equivalents will be affected by interest rate fluctuations. Given the balance of the term deposit at period-end, any fluctuations in the interest rate would lead to an immaterial change in net income (loss) and comprehensive income (loss).

**(ii) Foreign currency risk**

The Company is exposed to the financial risk related to the fluctuation of foreign exchange rates. The Company has cash calls receivable from optionee denominated in US dollars. At September 30, 2010, if the US dollar had weakened 10 percent against Canadian dollar with all other variables held constant, the net loss for the quarter would have been \$51,490 higher. Conversely, if the US dollar had strengthened 10 percent against Canadian dollar with all other variables held constant, the net loss would have been \$51,490 lower. The foreign exchange risk arises primarily as a result of the Company having US dollar denominated accounts receivable. The financial position of the Company may vary at the time that a change in foreign exchange rate occurs, causing the impact on the Company's results to differ from that shown above.

## COMMANDER RESOURCES LTD.

(An Exploration Stage Company)

Notes to Interim Financial Statements

For the Periods Ended September 30, 2010 and 2009

(Unaudited)

(expressed in Canadian dollars)

### 3. Financial Instruments (continued)

#### (d) Market risk (continued)

##### (iii) Other price risk

Other price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices, other than those arising from interest rate risk or foreign currency risk. The Company is exposed to other price risk with respect to their marketable securities. Given the limited change in the fair market value of marketable securities in the past period, estimated fluctuations in the market value would lead to an immaterial change in net income (loss) and comprehensive income (loss).

There were no changes in the Company's approach to risk during the period ended September 30, 2010.

### 5. Capital Management

The Company defines its capital as all components of shareholders' equity. The Company manages its capital structure and makes adjustments to it, based on the funds available to the Company, in order to support the acquisition and exploration of mineral properties. The Board of Directors does not establish quantitative return on capital criteria for management, but rather relies on the expertise of the Company's management to sustain future development of the business.

The properties in which the Company currently has an interest are in the exploration stage; as such, the Company is dependent on external financing to fund its activities. In order to carry out the planned exploration and pay for administrative costs, the Company will spend its existing working capital and raise additional amounts as needed. The Company will continue to assess new properties and seek to acquire an interest in additional properties if it feels there is sufficient geologic or economic potential and if it has adequate financial resources to do so. Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Company, is reasonable. There were no changes in the Company's approach to capital management during the nine months ended September 30, 2010. The Company is not subject to externally imposed capital requirements.

### **6. Investment in Warrants**

On June 4, 2009, the Company and Fjordland Explorations Inc. reached a settlement in respect to a shortfall on drilling by Fjordland on the Olympic and Rob properties as part of an option agreement between the parties dated August 2, 2006. Under the terms of the settlement, Fjordland issued 1,000,000 units consisting of one common share and one purchase warrant of Fjordland. Each warrant entitles the Company to purchase one common share at a price of \$0.16 per share until June 3, 2011. The common shares are recorded as marketable securities and recorded at market value (Note 4). The warrants are accounted for as a derivative instrument and recorded at fair value with changes in fair value recognized in the statements of operations.

The fair value of the warrants was estimated using the Black-Scholes option pricing model on receipt and recorded at \$68,200 as a recovery of mineral properties. During the nine months ended September 30, 2010, the unrealized loss on the 1,000,000 warrants was \$33,557, which has been recognized in the statements of operations.

### 7. Mineral Properties (continued)

#### (a) Baffin Island Properties, Nunavut

The Baffin Island Properties consists of two separate properties named Qimmiq and Bravo Lake. The Company owns 100% of the Qimmiq property, subject to an underlying agreement with Nunavut Tunngavik Incorporated (“NTI”) and certain future considerations to BHP Billiton (“BHP Billiton”). The Company owns 100% of the Bravo Lake property subject to certain future considerations to Xstrata Nickel (“Xstrata”), a business unit of Xstrata Canada Corporation, as further described under the property headings below. The Company earned a 100% interest in the Bravo Lake property by exercising its right under a Purchase Letter between the parties dated May 1, 2008.

An Agreement dated May 6, 2008 between the Company and Global Resources Corporation Pty Ltd. (“GRC”), pertaining to the Baffin Island Properties, was terminated on April 21, 2009.

On September 3, 2009, as amended on November 19, 2009, the Company entered into a Farm-in and Joint Venture Agreement (“Agreement”) with AngloGold Ashanti Limited’s subsidiary, AngloGold Ashanti Holdings Plc (“AngloGold”), related to both the Qimmiq and Bravo properties (collectively, “Baffin Properties”). Pursuant to the Agreement, AngloGold may earn a 51% participating interest in the Baffin Properties by funding \$20 million by December 31, 2014, with an additional requirement to fund \$5.5 million of the \$20 million in exploration expenditures before December 31, 2010. The initial commitment includes completion of a minimum of 3,000 metres of diamond drilling. Additional terms of the Agreement are as follows:

- The Company will manage the exploration for the initial two-year committed program period. AngloGold will pay a 10% management fee to the Company on all exploration expenditures incurred on the project during that period which are treated as part of the exploration expenditures to be funded by AngloGold. Accordingly, these amounts have been presented as a recovery related to the relevant property;
- AngloGold at its option, had advanced a cash payment of \$575,000 to the Company so that the Company could exercise its right to purchase the remaining interest in the Bravo property to 100%, which is treated as part of the exploration expenditures to be funded by AngloGold. Accordingly, these amounts have been presented as a recovery related to the relevant property; and
- Once AngloGold has vested a 51% interest in the Baffin Properties, a 51:49 joint venture will be formed between AngloGold and the Company. AngloGold may then elect within 60 days of vesting to increase its interest in the property to 70% by funding all on-going expenditures to complete a feasibility study within four years on at least one of the prospects on the Baffin Properties.

As part of the Agreement, on November 19, 2009, Ashanti Goldfields Services Limited, a wholly owned subsidiary of AngloGold, subscribed for and was issued a total of 10,000,000 units of the Company for gross proceeds of \$1.2 million. Each unit consists of one common share and one-half of one share purchase warrant. Each whole share purchase warrant entitles the holder to purchase one common share at a price of \$0.24 until November 17, 2011. Under the Agreement, AngloGold is required to hold at least a 10% equity stake in the Company and has the right, subject to TSX Venture Exchange approval, to participate in future private placements in order to meet its equity commitment in the Company under this Agreement.

For the nine months ended September 30, 2010, total recoveries on the Baffin Island project from AngloGold amounted to \$6,168,774, including management fees of \$560,797.

### **7. Mineral Properties** (continued)

#### **(a) Baffin Island Properties, Nunavut** (continued)

##### **(i) Qimmiq**

On February 22, 2008, the Company and BHP Billiton signed an Option Acceleration Agreement ("Revised Agreement"), providing the Company the option to accelerate its rights to earn a 100% interest in the Qimmiq Property by paying the lump sum of \$400,000 in cash to BHP Billiton on or before September 30, 2008. The deadline for this cash payment was subsequently extended to April 30, 2009 through a series of amending letters with the final letter dated February 25, 2009. On April 30, 2009, the Company exercised its right to accelerate its interest to 100% in the Property after BHP Billiton agreed to waive the \$400,000 cash payment required under the Option Acceleration Agreement. The Revised Agreement is now the only agreement between the Company and BHP Billiton pertaining to the Qimmiq Property.

Under the Revised Agreement, BHP Billiton retains the Right of First Refusal ("ROFR") to purchase all or any portion of the concentrates or other such mineral products produced only from non-gold resources on the Property. For the first four years of commercial production, BHP Billiton's ROFR would apply to 50% of the non-gold concentrates; the other 50% of the non-gold concentrates available for the Company to support or facilitate mine financing terms and other project capitalization and BHP Billiton shall retain a ROFR to match such financing terms. The Company will retain 100% control over the sale and marketing of all gold concentrates or gold products produced from the Qimmiq Property. The Revised Agreement is subject to a variable net smelter return ("NSR") gold royalty ranging from 1% to 3% based on gold prices (royalties are now held by International Royalty Corporation) and the terms and conditions of the underlying NTI agreements, which include a 12% royalty to NTI on net profits payable on production.

##### **(ii) Bravo Lake**

The Company currently owns 100% of the Bravo Lake property. Previously, the Company had been operating the Bravo Lake property since 2003 under a Letter Agreement with Xstrata. Under this agreement, the Company had the right to earn a 100% interest in the property by incurring \$8 million of exploration expenditures on the property by 2011. Xstrata held certain back-in rights to nickel, base metal or diamond deposits. There were no back-in rights to gold deposits. The property is subject to certain royalties payable to Xstrata including a sliding scale NSR from 1% to 3% on gold production, a 2% NSR on nickel production, a 1.5% NSR on (non-nickel) base metal production and a 2% gross overriding royalty on diamond production. The property was expanded by staking in September 2009 with the addition of 42 mineral claims totalling 34,964 hectares.

On May 1, 2008, the Company entered into a Purchase Letter with Xstrata providing the Company the option to accelerate its ownership in the Bravo Lake property to 100% for total cash payments to Xstrata of \$750,000 by December 31, 2008. In an amending letter dated November 13, 2008, the deadline for the unpaid balance of \$575,000 was extended to June 30, 2009 and further extended to December 31, 2009.

On December 7, 2009, the Company completed the purchase from Xstrata of a 100% interest in the Bravo Property thereby eliminating all remaining earn-in expenditures and extinguishing Xstrata's back-in rights. Xstrata retains a ROFR to purchase all or any portion of the concentrates or other such mineral products produced from any non-gold resource on the property. For the first four years of commercial production, Xstrata's right would apply to 50% of the concentrates; the other 50% of the concentrates available for the Company to support or facilitate mine financing terms and other project capitalization and Xstrata shall retain a ROFR to match such financing terms. Xstrata also retains the royalties provided under the original Letter Agreement but under the Purchase Letter, 50% of the royalties may be purchased by the Company for \$1 million at any time up to commencement of commercial production.

### **7. Mineral Properties** (continued)

#### **(b) Other properties** (continued)

##### **(i) Sarah Lake, Labrador**

The Company owns a 48.2% interest in the Sarah Lake property. Donner Metals Ltd. (“Donner Metals”) owns 51.8% and is the operator of the property.

##### **(ii) Storm Property, Nunavut**

The Company acquired three prospecting permits on February 1, 2008 for a \$15,000 cash deposit. The permits are good for a five-year term and the \$15,000 deposit is refundable on completion of an equivalent amount of exploration work in the first two years. On February 1, 2010, Commander was awarded a fourth five-year Prospecting Permit expanding the property size by 54,265 acres with a deposit of \$5,427.

##### **(iii) Despinassy, Quebec**

The Company owns 1,875,000 common shares of Alto Ventures and retains a 1% NSR royalty on 83 claims and 0.25% on the other 30 claims. Alto Ventures, the owner of the property, retains the right to buy-down the NSR on the 83 claims to 0.50% for \$500,000.

##### **(iv) Hermitage Project, Newfoundland**

###### **(a) Hermitage**

The Company owns 100% of the Blue Hills and White Bear properties subject to a 2% NSR for the original property owners. One-half of the NSR may be purchased for \$1 million.

On the adjacent Couteau Lake Property, the option agreement allowing the Company to earn a 100% interest was extended by amending agreements such that the expiry date of the option is changed to April 2, 2010. The agreement is subject to a 2% NSR for the vendor with a buy-back of one-half of the NSR for \$1 million. In a letter dated May 3, 2010 and executed on May 17, 2010, the option was terminated with no further obligations to Commander.

###### **(b) Strickland**

The Strickland Property consists of 147 claims southwest of the Hermitage Property.

The Quinlan Option agreement, originally executed on August 16, 2006 to cover a small claim block surrounded by the Strickland Property, was terminated by the Company on June 24, 2009.

###### **(c) Hermitage East and West**

The Company currently owns 100% of the properties.

---

### **7. Mineral Properties** (continued)

#### **(b) Other properties** (continued)

##### **(iv) Hermitage Project, Newfoundland** (continued)

##### **(d) Cochrane Pond**

The Property is owned 50% by the Company and 50% by Bayswater Uranium Corporation under a Joint Venture Agreement dated June 19, 2006 ("CPJV").

On November 13, 2008, CPJV entered into a Royalty Agreement ("Agreement") with Global Gold Uranium LLC ("Global Gold Uranium"), a wholly owned subsidiary of Global Gold Corporation ("Global Gold") following termination of a previous option agreement between the parties. Under the Agreement, CPJV provided Global Gold Uranium a 1% royalty on sales of uranium products extracted from the property in consideration for a cash payment of US\$50,000 to CPJV. The royalty is capped such that it will be reduced to 0.50% after the total royalty payments from production to Global Gold Uranium reach \$1 million.

##### **(v) Olympic & Rob, Yukon**

The Company owns 100% of the Olympic and Rob properties subject to a 1% NSR registered to Blackstone Ventures Inc. on the Rob property. The NSR may be reduced to 0.50% at any time for \$1 million.

An option agreement dated May 1, 2008 between the Company and Global Resources Corporation Pty Ltd. ("GRC"), a privately held Australian company that provided GRC the option to earn an initial 50% interest in the property, was terminated by the parties October 31, 2008 because GRC was unable to complete a planned Initial Public Offering as required under the agreement.

Also see Note 6.

##### **(vi) Abe, Pal, Aten, Mate and Tut, British Columbia**

The Company owns a 100% interest in the properties located within the Quesnel Trough of British Columbia. The vendor of the property retains a 1% NSR in the Abe and Pal properties and will participate in certain cash or share considerations received from the future sale or option of the properties to a third party.

##### **(vii) Tam/Misty, British Columbia**

The Company owns a 10% carried interest in the property. The Company will receive 50% of any royalties granted to the underlying owner under any subsequent third party agreement on the property.

Under an agreement dated February 13, 2006 between the underlying owners and Teck Cominco Limited ("Teck Cominco"), the Company received a cash payment of \$2,500. In addition, the Company is entitled to a 1.5% NSR of which \$250,000 is payable as an advance royalty starting on December 31, 2012. This royalty is subject to a buy-down provision that, if exercised, would pay \$1 million to the Company.

(Unaudited)

(expressed in Canadian dollars)

---

### **7. Mineral Properties** (continued)

#### **(b) Other properties** (continued)

##### **(viii) Green Bay, Newfoundland**

The Company holds a 100% interest in the Green Bay property, which includes the Orion gold deposit. The Orion deposit contains an Inferred Resource of 119,000 ounces of gold contained within 710,285 tonnes grading 5.227 g/t Au as defined in a 43-101 Technical Report published in July, 2010.

Under an Option Agreement dated June 14, 2010 (based on the terms of the Letter of Intent dated March 11, 2010 as amended March 19, 2010), BMB Capital Corp, a Capital Pool Company ("BMB") may acquire an initial 50% interest ("Initial Interest") in the Green Bay mineral property by issuing to Commander 12,000,000 treasury shares of BMB and by raising the amount of CDN\$750,000 dollars through completion of a private placement financing ("Project Financing"); such funds to be used by BMB for conducting mineral exploration activities on the Property.

Once BMB has vested its Initial Interest, BMB will be responsible for funding all exploration expenditures on the Property. BMB shall commit to spending a minimum of \$750,000 in eligible work expenditures ("Committed Expenditures") on the Property within the 18 month period following the approval date. BMB, at any time from the date of vesting its Initial Interest up to the earlier of the date BMB commences commercial production from the Property or a date that is before the expiry of 5 years from the date BMB vests its Initial Interest, will have the right to acquire the remaining 50% of the Property from Commander by issuing 5,000,000 treasury shares of BMB to Commander.

Once BMB has vested its Initial Interest and completed the committed expenditures, BMB may elect not to increase its interest to 100% in which event the parties agree that further exploration and development on the Property will be operated under a 50/50 Joint Venture ("JV") between the parties in accordance with standard industry terms. It is agreed that for the purposes of the JV, the deemed expenditures will be calculated based on the actual expenditures incurred by BMB from the approval date to the date of its election to form a JV. Furthermore it is agreed that at that time, Commander's deemed expenditures shall be calculated at 1.5 x (150%) of BMB's actual expenditures, but remain as a 50:50 JV. For greater clarity, should a JV be formed, Commander's 50% interest will be carried until the BMB's actual expenditures equal Commander's deemed expenditures.

The exploration lands outside the current boundary of Orion shall be subject to a 2% net smelter returns royalty ("NSR") payable to Commander with BMB having the right to acquire 50% of the NSR for \$1,000,000 at any time up to commercial production from the exploration lands.

See subsequent events (Note 15).

### **7. Mineral Properties** (continued)

#### **(b) Other properties** (continued)

##### **(ix) Nepisiguit/Stewart, New Brunswick**

The Company owns 100% of the property subject to a 2.75% NSR retained by BHP Billiton. The NSR is subject to a buy-down to 1% NSR for \$1.5 million at any time.

On July 29, 2010, the Company announced that it had entered into an option agreement with Stratabound Minerals Corp. providing Stratabound the right to earn an initial 60% interest in Commander's Nepisiguit and Stewart properties, located in the Bathurst Mining Camp of New Brunswick.

Under the terms of the option, Stratabound has the right to earn an initial 60% participating interest in the Properties over a 5 year period by issuing to Commander 400,000 Stratabound shares and completing \$1,500,000 in eligible exploration expenditures. Stratabound would issue 50,000 common shares to Commander upon receipt of regulatory approval, and agrees to committed expenditures of \$150,000 on the Properties in the first year, of which \$50,000 must be expended by October 30, 2010. The first year's committed program must include at least 1,000 metres of diamond drilling.

Upon vesting its 60% interest, Stratabound may then, within 60 days, elect to increase its interest to 65% by incurring an additional \$1,000,000 in eligible expenditures over a two year period and issuing an additional 100,000 Stratabound shares to Commander.

Once a joint venture is formed Commander may elect at any time to convert its interest into a 1% Net Smelter Returns Royalty (NSR). Stratabound will have the option, for 12 months following Commander's election, to buy one-half of the royalty on either property for \$1 Million, or to buy one-half of the royalty on both properties for \$2 Million.

Stratabound will be the operator during the term of the option, and will be the initial operator pursuant to any joint venture agreement entered into by the parties thereafter.

The initial 50,000 common shares of Stratabound had been received and were included in marketable securities.

### **7. Mineral Properties** (continued)

#### **Environmental**

The Company is subject to the laws and regulations relating to environmental matters in all jurisdictions in which it operates, including provisions relating to property reclamation, discharge of hazardous material and other matters. The Company may also be held liable should environmental problems be discovered that were caused by former owners and operators of its properties and properties in which it has previously had an interest. The Company conducts its mineral exploration activities in compliance with applicable environmental protection legislation. The Company is not aware of any existing environmental problems related to any of its current or former properties that may result in material liability to the Company.

Environmental legislation is becoming increasingly stringent and costs and expenses of regulatory compliance are increasing. The impact of new and future environmental legislation on the Company's operations may cause additional expenses and restrictions.

If the restrictions adversely affect the scope of exploration and development on the resource properties, the potential for production on the properties may be diminished or negated.

#### **Title to resource properties**

Although the Company has taken steps to verify the title to resource properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee the Company's title. Property title may be subject to unregistered prior agreements or transfers and title may be affected by undetected defects.

#### **Realization of assets**

The resource properties comprise substantially all of the Company's assets. Realization of the Company's investment in these assets is dependent upon the establishment of legal ownership, the attainment of successful production from the properties or from the proceeds of their disposal.

Resource exploration and development is highly speculative and involves inherent risks. While the rewards if an ore body is discovered can be substantial, few properties that are explored are ultimately developed into producing mines.

There can be no assurance that current exploration programs will result in the discovery of economically viable quantities of ore. The amounts shown for acquisition costs and deferred exploration expenditures represent costs incurred to date and do not necessarily reflect present or future values.

**9. Advance from Optionee**

The Company's optionee, AngloGold, had advanced \$6,483,438 to the Company to be used in the Baffin properties including \$589,403 for management fees. During the nine months ended September 30, 2010, \$5,607,976 of exploration expenses were incurred and \$560,797 in management fees were recovered leaving a balance of \$314,664.

**10. Share Capital****(a) Authorized**

Unlimited common shares without par value

**(b) Shares issued**

During the nine months ended September 30, 2010, the Company issued 735,000 common shares on the exercise of options by officers, consultants and employees at an average price of \$0.18 per share. Total proceeds received upon exercise were \$129,650.

**(c) Stock options**

Options to purchase common shares have been granted to directors, employees and consultants at exercise prices determined by reference to the market value on the date of the grant. Under the Company's Stock Option Plan, the Company may grant stock options for the purchase of up to 18,000,000 common shares. Vesting of stock options is made at the discretion of the board of directors at the time the options are granted. At September 30, 2010, the Company had stock options outstanding for the purchase of 8,702,500 common shares with an average remaining contractual life of 2.93 years, with 8,405,000 shares exercisable at September 30, 2010.

Notes to Interim Financial Statements

For the Periods Ended September 30, 2010 and 2009

(Unaudited)

(expressed in Canadian dollars)

**10. Share Capital** (continued)**(c) Stock options** (continued)

There were 8,405,000 options vested and exercisable at September 30, 2010 with a weighted average exercise price of \$0.28 and a weighted average remaining contractual life in years of 2.88.

The fair value of stock options used to calculate compensation expense is estimated using the Black-Scholes option pricing model with the following weighted average assumptions and resulting fair value:

	<b>2010</b>	<b>2009</b>
Risk-free interest rate	1.90%	1.87%
Expected dividend yield	0.00%	0.00%
Expected stock price volatility	91.53%	107.71%
Expected option life in years	5	5
Grant date fair value	\$0.213	\$0.061

**(d) Warrants and agent's warrants**

The following warrants are outstanding at September 30, 2010 and 2009:

<b>Exercise Price</b>	<b>Expiry Date</b>	<b>Outstanding December 31, 2009</b>	<b>Issued</b>	<b>Exercised</b>	<b>Expired</b>	<b>Outstanding September 30, 2010</b>
\$0.24	November 17, 2011	5,000,000	-	-	-	5,000,000
		<b>5,000,000</b>	-	-	-	<b>5,000,000</b>

The weighted average exercise price of the warrants outstanding at September 30, 2010 is \$0.24 (2009 - \$0.24).

**11. Related Party Transactions**

In addition to the related party transactions disclosed elsewhere in these financial statements, the Company has the following related party transactions and balances:

- (a) During the nine months ended September 30, 2010, the Company incurred \$16,374 (2009 - \$7,998) in legal fees, share issuance costs and mineral properties costs to a law firm in which a director of the Company is a partner. As at September 30, 2010, \$3,432 was payable to the law firm. The Company also incurred \$60,075 (2009 - \$60,075) in consulting fees to two companies controlled by two officers of the Company.
- (b) Included in marketable securities as at September 30, 2010 are 258,000 (2009 - 258,000) common shares of Diamonds North Resources Ltd., a company related by virtue of a director in common.
- (c) Included in Accounts Payable as at September 30, 2010, \$5,351 were payable to a company related by common directors, and \$5,805 were payable to an officer for expenses incurred.

Related party transactions are recorded at the exchange amount being the amount agreed upon by both parties and have no interest or stated terms of repayment.

### **15. Subsequent Events**

- On October 6, 2010, the Company granted 100,000 incentive stock options to a director of the Company under its stock option plan, in accordance with the Company's compensation policy. The options are exercisable for five years at a price of \$0.18 per share.
- On October 7, 2010, the Company announced that the TSX Venture Exchange Inc. has accepted for filing an Option Agreement between Commander and BMB Capital Corp. dated June 14, 2010. BMB Capital Corp.'s common shares commenced trading on October 6, 2010 on Tier 2 of the TSX Venture Exchange under the new name "Maritime Resources Corp." and new trading symbol "MAE". Commander had been issued 12 million shares of Maritime as part of the transaction.

Maritime Resources had earned the right to acquire a 50% interest in Commander's Green Bay Property, located in the King's Point area, Newfoundland by issuing to Commander 12,000,000 common shares; and is responsible for funding all exploration expenditures and is committed to conduct \$750,000 of mineral exploration activities on the Property by April 5, 2012. The Option Agreement also provides Maritime Resources the further option of increasing its ownership in the Property to 100% by issuing 5,000,000 additional common shares to Commander before the earlier of the date of commencement of commercial production and the expiry date of 5 years after the acquisition of the Initial Interest. In the event Maritime Resources exercised the Second Option to acquire a 100% interest in the Property, the 100% interest of Maritime Resources in the Property will be subject to a 2% net smelter royalty payable to Commander.

The primary asset on the Green Bay Property is the Orion Gold Deposit ("Orion") and surrounding Exploration Lands. Orion is located in an area of excellent infrastructure, 14 kilometres northwest of Springdale, Newfoundland. The Hammerdown Gold Mine is a former producer and is located within 2 kilometres of Orion. Diamond drilling was conducted by Major General Resources in the 1990's, and has enabled the establishment of an inferred resource of 202,715 ounces gold from 3,304,000 tonnes grading 1.968 g/t using a cut-off grade of 1 g/t Au over 1.20 metres. An independent NI 43-101 Technical Report on the property has recently been filed. Maritime has initiated plans for a diamond drill campaign, commencing in late 2010, to expand and define this resource.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

**Description of Business**

Commander Resources Ltd. (“Commander”) is a company engaged in the acquisition and exploration of prospective gold, base metal, and uranium properties primarily in Canada. Commander is a reporting issuer in British Columbia and Alberta, and trades on the TSX Venture Exchange under the symbol CMD.

**Forward-Looking Information and Report Date**

This Management Discussion and Analysis (“MD&A”) may contain forward-looking statements that involve risks and uncertainties. When used in this MD&A, the words “anticipate”, “believe”, “estimates”, “expects” and similar expressions are intended to identify such forward-looking statements. Readers are cautioned that these statements, which describe Commander’s proposed plans, objectives, and budgets, may differ materially from actual results.

The following discussion and analysis of the financial position and results of operations for Commander is dated November 18, 2010 (the “Report Date”) and should be read in conjunction with the financial statements and the notes thereto for the nine months ended September 30, 2010 prepared in accordance with Canadian generally accepted accounting principles.

**Highlights for the Three months Ended September 30, 2010.**

Highlights for the quarter included:

- The Company completed the 2010 program of filed work at the Baffin gold project. The program achieved the desired objectives of identifying the trend of mineralization at Malrok, and establishing Kanosak as a very large gold bearing system. The extent of the mineralization at Malrok remains open. Drilling at Kanosak established gold bearing mineralization over a 2.5km strike length and remains open in all directions.
- The Company entered into an option agreement with Stratabound Minerals Corp. providing Stratabound the right to earn an initial 60% interest in Commander’s Nepisiguit and Stewart properties in New Brunswick.
- Subsequent to the quarter end the Company received 12,000,000 common shares from Maritime Resources Corp. (formerly BMB Capital Corp.) in exchange for a 50% interest in the Green Bay Property, located in the King's Point area, Newfoundland. Trading of BMB, under the new name, resumed on October 7, 2010. Commander currently holds more than 50% of the shares of Maritime Resources. Two officers of Commander are also officers of Maritime.

*Baffin Island Gold Project, Nunavut*

The Company completed the drilling program for 2010 at the Baffin Island Gold Project. Reconnaissance drilling at Kanosak intersected zones of gold mineralization with locally high grades, while the final results from Malrok continued to define and enlarge the scope of the gold bearing structures. The widespread extent of gold mineralization confirms continuing potential for a significant gold discovery.

The 2010 drill program at the Baffin Gold Project had two objectives: 1) to extend the gold zone identified by drilling at Malrok in 2004; and 2) to initiate drilling at the newly discovered Kanosak prospect where significant high grade gold mineralization was identified over an extensive area on surface with channel and grab sampling in 2008 and 2009. The drilling at Kanosak tested a strike length of 1.1 km with 11 holes, while 2 further holes were stepped out 1.5 km to the north. Significant high grade intercepts were encountered in two, thick metasedimentary horizons. Both horizons are gently dipping, and the upper one is exposed at surface and is 20 to 30 m thick. The lower horizon, is parallel to the upper zone, and is approximately 50 metres beneath the upper zone. Quartz and arsenopyrite veins, which often host high grade gold concentrations cut through both target horizons. Significantly, the gold and the arsenopyrite are not restricted to the veins and gold is distributed throughout the two thick metasedimentary horizons.

**Kanosak:**

The Kanosak gold prospect was discovered by prospecting in 2008 and sampled by extensive channel sampling in 2009. The prospective gold bearing zone was identified as a corridor approximately 300 m wide by 3.5 km long which hosts high grade gold mineralization in outcrop and angular boulders. In 2009 a test Induced Polarization survey was conducted over the central portion of the zone. This survey defined a significant chargeability high closely related to the distribution of gold mineralization and associated arsenopyrite observed on surface.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

The Company had received all assays from its 2010 exploration program on the Baffin Gold project, including results from the final five holes drilled on the Kanosak prospect and results from new surface discoveries. The table below summarizes significant results from drill holes completed at the Kanosak prospect in 2010.

Prospecting work in the Kanosak area discovered two new areas of gold mineralization; one between the Kanosak Main and Kanosak North prospects and significantly, one located 500 metres to the northeast of the Kanosak North prospect, which extends the Kanosak structural corridor to at least 4 kilometres. Added to the potential of this new area is the coincidence of the surface showings with a northeast trending, 300 metre wide by 1,800 metre long geophysical anomaly defined by the recently completed Induced Polarization (IP) survey.

The combination of the drill results and new prospecting discoveries demonstrate the potential of the trend to host significant gold mineralization. It is important to note that even in holes where no significant values of gold were noted, strongly anomalous gold contents up to 500 ppb (equivalent to 0.5 g/t Au) are present in two parallel zones.

Drill Hole	Interval		Width (m)	Grade (g/t)
	From	To		
KAN-10-01	7.47	17.25	9.78	0.98
includes	11.89	16.51	4.62	1.55
includes	88.53	89.47	0.94	22.50
KAN-10-02	2.03	3.66	1.63	1.89
KAN-10-03	2.86	29.53	26.67	0.21
includes	4.46	5.26	0.80	3.36
KAN-10-04	8.88	13.09	4.21	2.16
KAN-10-05	7.70	10.36	2.66	1.37
KAN-10-06	20.56	28.50	7.94	0.79
includes	26.15	27.60	1.45	7.48
KAN-10-07	3.54	16.77	13.23	1.80
includes	7.38	16.77	9.39	2.26
includes	10.72	11.23	0.51	31.38
KAN-10-11	17.10	25.01	9.32	1.18
includes	17.10	19.76	2.66	2.60
KAN-10-12	67.83	69.01	1.18	6.14

The reported widths are close to true widths, although some of the gold mineralization occurs in quartz veins. Drill hole KAN-10-13 was terminated prematurely due to drilling difficulties.

The 2010 Kanosak drill holes were targeted mainly to test near-surface gold mineralization and IP targets over a wide area of the prospects. Only six of the holes were drilled on the 2009 test Induced Polarization (IP) survey area; the strongest, widest portions of the 2009 IP anomalies have not yet been tested.

**Kanosak Prospecting Results:**

Prospecting of the Kanosak Gold Prospect during 2010 continued to outline new areas of gold mineralization. The 2010 work extended the mineralized trend as gold mineralization and associated arsenopyrite was observed on surface between the Kanosak Main Zone and the North Zone. Fifteen grab samples were taken with five of the samples returning assay values that range from 1.30 g/t to 226.3 g/t gold. The highest grade sample was taken from an area of outcrop, and contained abundant visible gold. This mineralized area is particularly significant as it indicates that gold mineralization could be extensive in this poorly exposed area.

Arsenopyrite containing gold occurrences was observed primarily in outcrop 500 metres to the northeast of the Kanosak North Zone. Twelve grab samples were taken with five of the samples returning assay values ranging from 1.17 g/t to 5.35 g/t gold. This mineralization is significant since it corresponds to a northeast trending, 300 metre wide by 1,800 metre long anomaly defined by the recently completed IP survey. Moderate to very strong chargeability values 2 to 3 times stronger than the targets drilled this season define this anomaly.

Two other zones of arsenopyrite mineralization carrying gold were discovered both to the east and to the southwest of Kanosak. Sixty grab samples were taken with thirteen of the samples returning assay values that range from 1.23 g/t to 9.68 g/t gold.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

**Malrok:**

The 2010 Malrok drill program was designed to test the direction and extent of the mineralized zones identified by drilling in 2004. A total of 19 holes were drilled in 2010, including 4 from the ice surface of Malrok Lake prior to an early breakup. The planned program included provision for 10 holes to be drilled from the ice as the 2004 results appeared to indicate that the mineralized silicate iron formation that hosts the gold was dipping in a south-east direction under the lake. Due to the early thaw this year, the program was unable to complete all of the ice based holes and additional land based holes were drilled to test the strike in southerly and north-east directions.

Drill hole MAL-10-58 returned a 3 metre interval grading 6.17 g/t Au, confirming the continuity of the well mineralized Malrok South zone. This 200 metre wide zone plunges easterly and is open into Malrok Lake. To the southeast, holes Mal-10-49 to Mal-10-53 and Mal-10-56 tested for extent of Malrok South for a further 400 metres to the southeast. These holes intersected narrow intervals of the iron formation with no significant gold values.

At Malrok North, hole Mal-10-57 was drilled to test for extension of the high grade zone identified by previous drilling. No significant values were encountered in this hole. This zone was to be tested initially by drilling further down plunge on the ice at Malrok Lake, however that testing was prematurely terminated due to early melting of the ice. Holes, Mal-10-54 and 55, were drilled 500 metres to the northeast; hole Mal-10-54 encountered a 2.6 metre interval grading 2.1 g/t Au while hole Mal-10-55 did not encounter the gold-bearing iron formation.

Part of the 2010 planned drill program was to test the large, circular Malrok structure with 6 to 8 drill holes to search for extensions of the gold bearing iron formations around the 3 kilometre diameter of the Malrok formation. These holes were to be based on defined structural and geophysical targets as well as geological / stratigraphic understanding in areas of extensive overburden and younger cover rocks. This drilling was not undertaken as the completed 19 drill hole program utilized all budgeted drilling for the 2010 program.

*Orion Gold Project, Newfoundland*

Subsequent to quarter-end (in October 2010), Commander sold 50% of its Orion gold deposit near Springdale, Newfound, to BMB Capital to be used as the qualifying transaction for a new TSX-Venture Exchange listing. In exchange, Commander received 12 million shares of the new company. A flow-through financing for \$750,000 was completed in September, and the new company was listed on October 7 as Maritime Resources (MAE – TSX.V). There are currently a total of 22 million shares of Maritime outstanding. Work had started on the property, in the form of IP, EM and Magnetic Surveys and a 4,000 metre drill program is anticipated to start in November 2010. Orion currently has an Inferred Resource of 119,000 ounces of gold at a grade of 5 gm/Tau as defined in a 43-101 Technical Report published in July 2010. The mineralized zone is open in all directions and the drill program is expected to expand this resource. The deposit is located in an area of good infrastructure and labour, adjacent to the recently mined Hammerdown deposit and can be worked year round.

*Nepisiguit-Stewart Property, New Brunswick*

In August 2010, Commander optioned the Nepisiguit property to Stratabound Minerals for shares of Stratabound and work commitments. Stratabound can earn an initial 60% interest in the property. Stratabound holds properties adjacent to the Nepisiguit property and has recently commenced drilling on Commander's property. The first drill target being tested is the Stewart Copper zone where drilling by Commander encountered wide intervals of strong copper mineralization. Intersections up to 20 metres grading 1.1% Cu and 4.5 metres grading 2.5% Cu, with significant cobalt values, were encountered. The Stewart Zone is located about 1.5 km north of Stratabound's Captain Copper zone. The Nepisiguit Property also hosts widespread zinc-lead-silver mineralization just north of Stratabound's recently announced high grade base metal drill intersections on their CNE property.

**Active Projects**

**Baffin Island Gold Project, Nunavut**

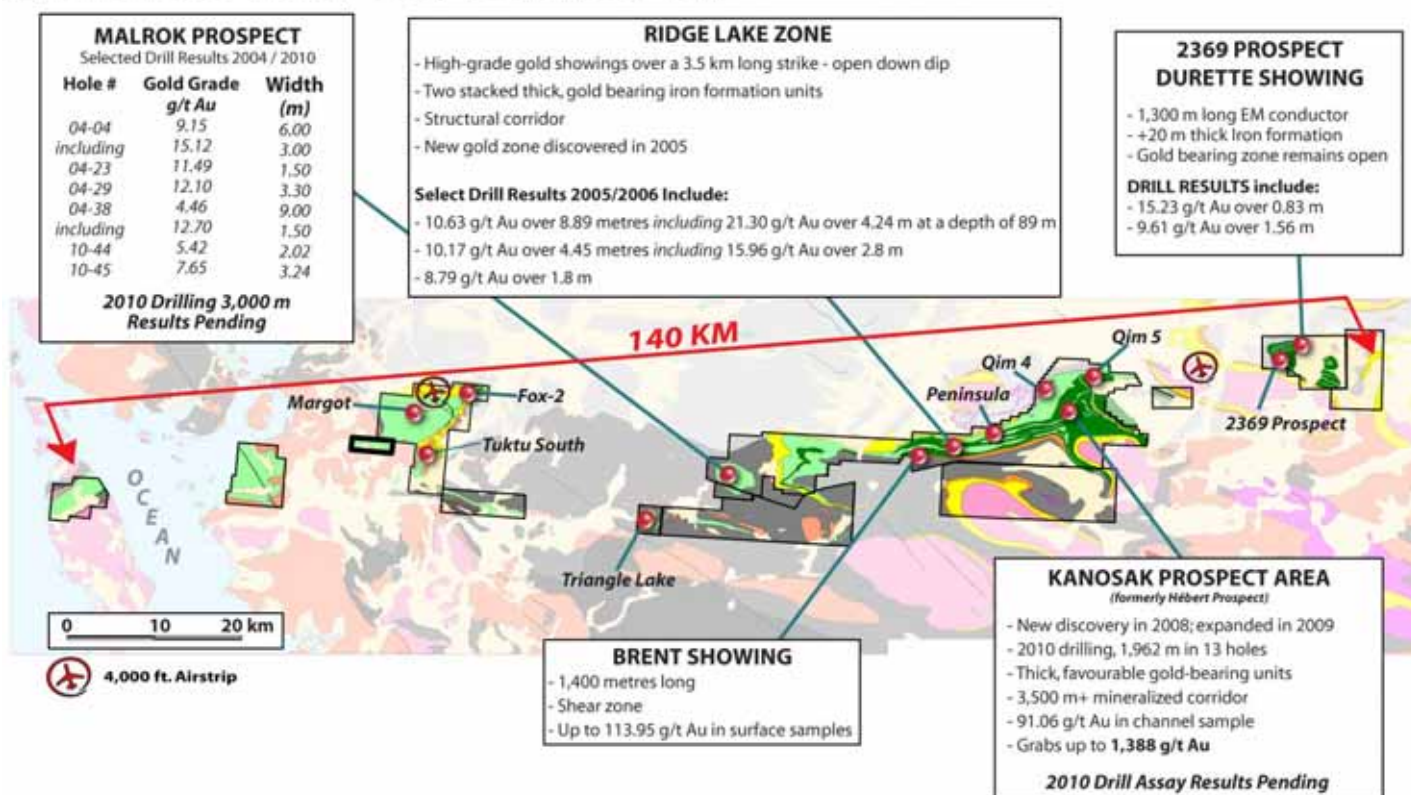

The Baffin Gold Project represents a district-scale gold belt with similar geological and genetic origins to the large Homestake district in South Dakota and the Morro Velho gold deposit in Brazil. To date the Baffin Project has yielded numerous gold prospect areas occurring over a strike length in excess of 100 kilometres. The property includes high-grade gold occurrences in at least 3 separate iron formation units, within shear zones and in quartz veins in younger granodiorite, gabbro, and

metasedimentary units. In each of the different settings, gold occurs primarily as free gold, disseminated, within quartz veins and associated with arsenopyrite. The most advanced prospects are Malrok and Ridge Lake, where multiple shallow gold drill intercepts require follow-up. The Brent Shear Zone and the Kanosak Prospect Area are gold targets outside of the iron formation units. Kanosak was first found in 2007, expanded and enhanced by work completed in 2008, and further expanded with new discoveries in 2009. The first drilling program in 2010 consisted of 1,962 metres in 13 holes. Assays for these holes are awaited.

The project area has access to tidewater and is dotted with deep lakes providing access to water throughout the year. There are two “Distant Early Warning” (DEW line) radar stations located on the Property, one with an operational 4,000 foot airstrip. Commander engaged GeoVector Management Inc. of Ottawa to manage the field program in 2006, 2007, 2008, 2009 and 2010.

## BAFFIN ISLAND GOLD PROJECT

The major prospects that constitute the Baffin project and recent work by Commander are described as follows:

### *Qimmiq Property*

Malrok, Ridge Lake, Brent, and Kanosak are located on the Qimmiq property along with several of the other gold prospect areas. In 2009, work was only completed on the Kanosak prospect area. In 2010, diamond drilling was completed on the Malrok Zone (3,597.5 metres in 19 holes) and the Kanosak prospect (1,962 metres in 13 holes).

### *Malrok*

Diamond drilling at Malrok in 2004 (3,617 metres in 39 holes) and in initial 2010 drilling (3,597.5 metres in 19 holes – results waited for 10 holes) confirm the continuity of the iron formation with potential for high-grade gold zones. The Malrok zone is composed of structurally-thickened silicate iron formation units traced through surface sampling and drilling over a strike length of approximately 2 kilometres. The horizon varies in thickness from approximately 0.5 to greater than 9 metres. Surface samples returned high-grade gold assays of up to 212 g/t gold and drilling results down to 50 metres depth included 15.12 g/t

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

gold over 3.0 metres and 12.1 g/t Au over 3.3 metres. The gold zone at Malrok is exposed at surface; the current drill data indicates that the zone is open to expansion along a predominant southeast or easterly plunge direction.

A summary of the diamond drilling in 2010 at the Malrok prospect can be found in the “Highlights” section above and will be further discussed in subsequent reports once all data has been received and interpreted.

***Ridge Lake***

The Ridge Lake Zone, located 30 kilometres east of Malrok, contains a 3.5 kilometre strike length of gold-bearing iron formation. Previous shallow drilling targeting a 1.3 kilometre portion of the trend defined a structurally-thickened gold-rich iron formation that is host to southwesterly plunging higher grade shoots. Better drill intercepts from these shoots included 10.63 g/t gold over 8.89 metres (including 21.30 g/t gold over 4.24 metres) at a depth of 89 metres down-dip from a high-grade surface outcrop containing 15.4 g/t gold over 1.9 metres. Other notable intercepts included 10.17 g/t gold over 4.45 metres (including 15.96 g/t gold over 2.85 metres) at a depth of 105 metres, 8.79 g/t gold over 1.80 metres, and 17.48 g/t gold over 2.15 metres. The mineralized system remains open and is at the stage where detailed close-spaced drilling is necessary to define the main gold shoots and identify the larger tonnage potential. Detailed structural interpretation, re-logging of drill core and surface mapping will be completed in 2010 to define the next phase of drilling.

***Kanosak (formerly named the Hébert Prospect Area)***

The Kanosak Prospect Area was first discovered by prospecting in 2007 and expanded with new discoveries in 2008. The discovery was further expanded and enhanced by the 2009 follow-up program. The area, consisting of Kanosak Main, Kanosak South (formerly Hebert South) and Kanosak North (formerly Traciane) outlines a 3.5 kilometre long, 300-400 metre wide structural corridor that remains open to further expansion (refer to Map below for location). Two additional showings, the “Frankie” and “Southeast” showings are located 2 kilometres east and 3.5 kilometres southeast, respectively, from the Kanosak Main gold zone. Both prospects host quartz-arsenopyrite-scorodite vein systems.

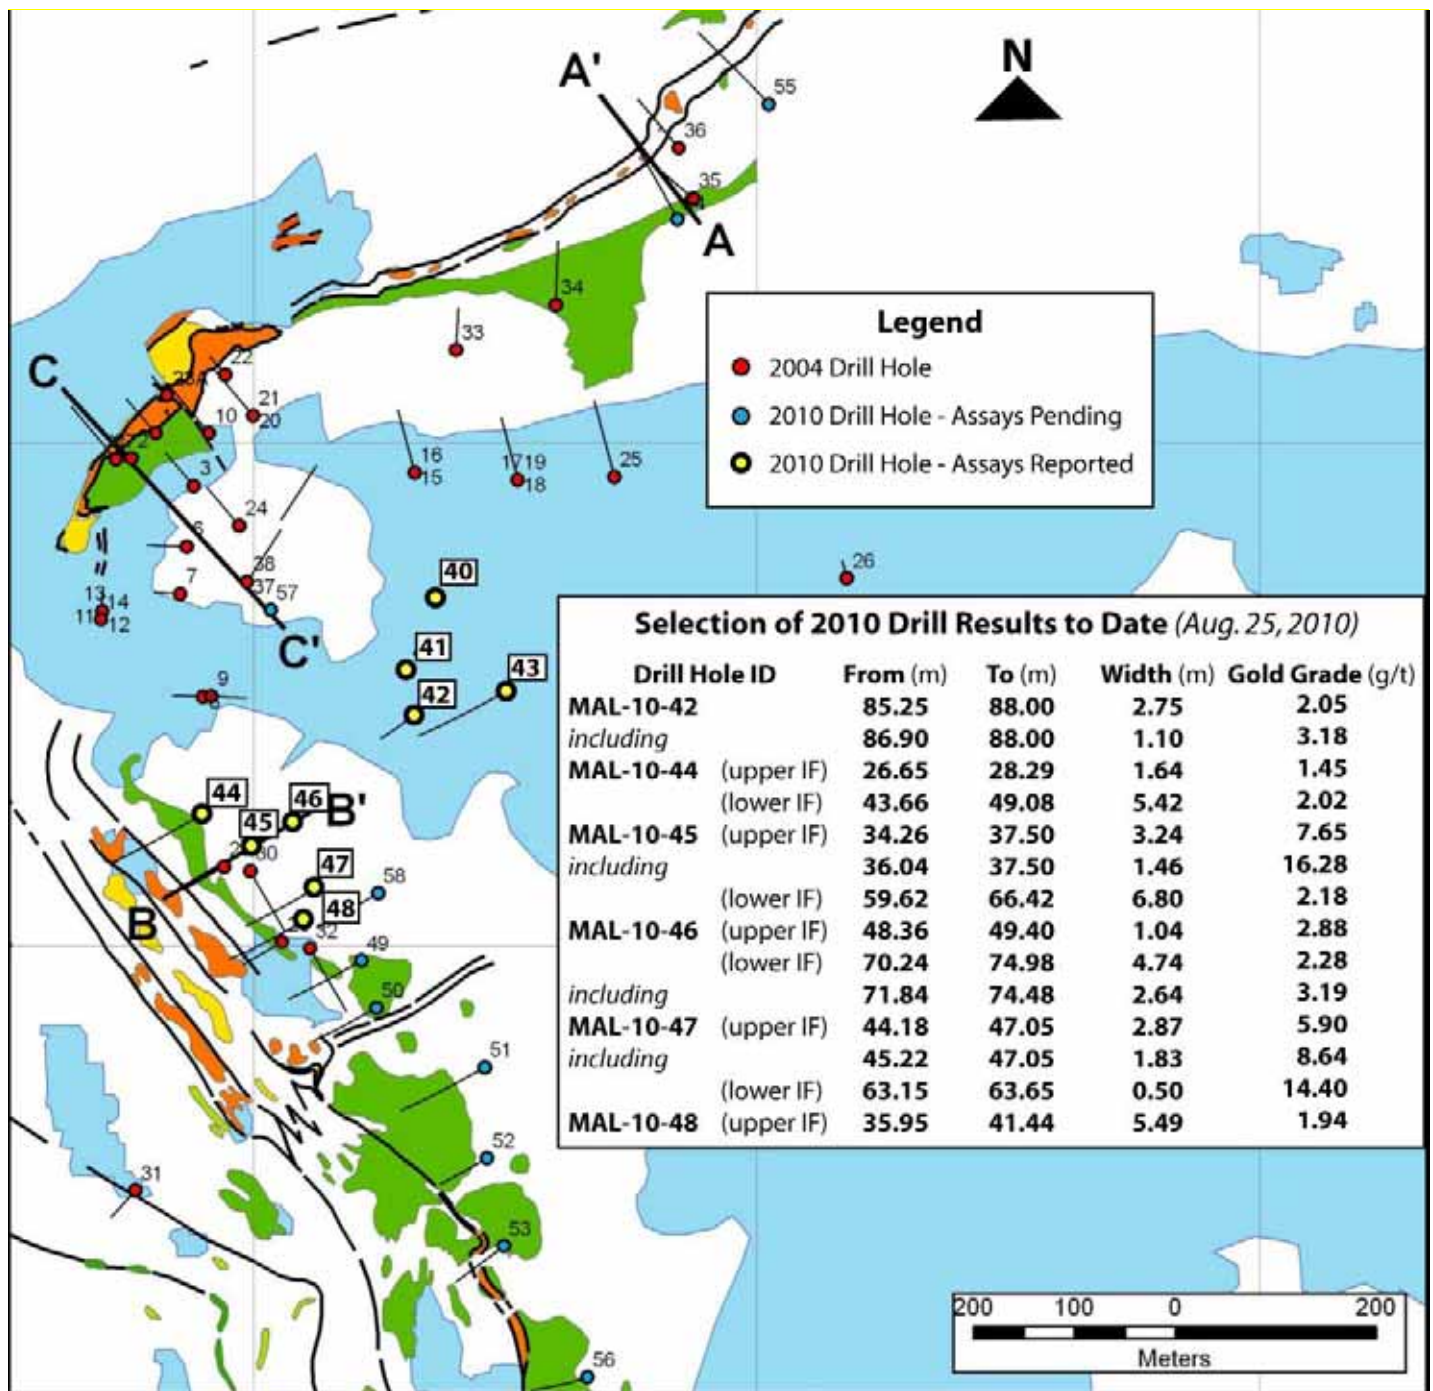

Channel and grab sample results from quartz-arsenopyrite vein sets and intervening stratabound semi-massive gold-bearing arsenopyrite gossans over portions of this corridor included a high percentage of high gold values. Gold mineralization extends from high grade quartz veins into altered arsenopyrite-bearing sedimentary units. The combination of gold in closely-spaced vein sets and in the adjacent wall rocks greatly improves the potential to delineate a large scale body of mineralization on this part of the Baffin gold project. In addition, similarities in vein orientation, style, alteration and gold mineralization confirm that the Kanosak Prospect, which is at least 3.5 km in strike length and 300 m wide, is part of one large gold mineralized system that remains open to extension both to the northeast and southwest.

Gold-bearing quartz veins penetrate the gently dipping sedimentary rock package to an unknown depth. Limited outcrop exposure of favourable arsenopyrite-bearing units constrains the amount of sampling that can be done on surface. However, where these units are exposed, significant gold values occur in wall rock adjacent to veins.

There appears to be a close correlation between increased gold values and higher arsenopyrite content in both quartz veins and metasedimentary wall rocks. This provides Commander with a very useful guide for drill targeting since arsenopyrite can be detected by a geophysical survey technique known as Induced Polarization (IP). A test IP survey over the Kanosak Main zone completed in 2009 detected a 300 m long x 350 m wide anomaly coincident with all gold intervals. This IP anomaly is open beyond the survey coverage area. A single test line IP over the southern end of the Kanosak North showing revealed a 200 metre wide chargeability anomaly, commencing at the edge of the vein system and extending eastward under overburden.

Where observed, coarse gold occurs most commonly along partings or boundaries of coarse arsenopyrite contained within quartz veins and to a lesser extent within the quartz veins themselves and within arsenopyrite in the hosting sedimentary rocks. There is an apparent silver-bismuth-lead association with the gold mineralization. At Kanosak South, which is located close to one kilometre south of Kanosak Main, channel samples from a series of quartz veins included 373.90 grams per tonne gold over 0.25 metres, 241.30 grams per tonne gold over 0.25 metres and 104.50 grams per tonne gold over 0.30 metres. Grab sample results included high values up to 442 grams per tonne gold. At Kanosak North, located 1.5 kilometres north of Kanosak Main, channel samples in quartz veins over a 100 metre outcrop exposure included 66.84 grams per tonne gold over 0.38 metres, 31.49 grams per tonne gold over 0.85 metres and 96.51 grams per tonne gold over 0.20 metres.

A summary of the current 2010 drilling on the Kanosak prospect can be found in the quarterly “Highlights” section above.

*Other Prospects*

The Brent Shear zone, located 5 kilometres southwest of Ridge Lake consists of a 1,400 metres long shear zone with well developed quartz veining that contains arsenopyrite and pyrrhotite. Surface grab samples returned up to 113.95 g/t gold with 21 of 66 samples assaying greater than 5 g/t gold. 8 holes totalling 994.79 metres were drilled in 2006 and 2007. 2 holes in 2006, drilled 100 metres apart, confirmed the gold potential of the shear zone. The best result was 6.41 g/t gold over 1.0 metre. An additional shear zone with modest gold values was discovered at Brent. No work was completed on the Brent Zone during 2010.

At the Peninsula prospect, located about 6 kilometres east of the Ridge Lake zone, 2 holes were drilled in 2007 2 kilometres apart along a previously untested 6 kilometre portion of the property. Both holes intersected a gold-bearing iron formation similar to the high-grade gold zone at Ridge Lake. One of the holes intersected 3.59 g/t over 1.27 metres, including 8.16 g/t over 0.50 metres confirming the potential of this area. No work was completed on the Peninsula prospect in 2010.

*Bravo Lake Property, Nunavut*

The main gold potential on the Bravo property exists on the far eastern group of claims that were originally covered by the 2369 prospecting permit. The main showing area is referred to as Durette. With the discovery of the new Kanosak Prospect area on the adjacent Qimmiq Property and Commander's new partnership with AngloGold on the Baffin Island project, the Bravo Property was expanded by staking in 2009. Base metal (Zn, Pb) and silver potential exists on the Tuktu claim group on the far western portion of the property.

*Durette – 2369 Area*

Diamond drilling on the Durette prospect in 2006 and 2007 produced modest results, the best being 9.61 g/t gold over 1.56 metres at a depth of 14.30 metres within a 19 metre thick highly silicified iron formation (hole DUR-06-03). This trend is open and continues to the west under cover for 300 metres and into the area where a surface sample collected in 2005 assayed 17 g/t gold. In 2007, 5 holes totalling 550.5 metres drilled along a 500-metre long EM conductor tested the area of mineralization intersected in DUR-06-03. The 2007 drilling intersected thick intervals of silicate iron formation (SIF) ranging from 5 to 30 metres thick and carrying variable amounts of arsenopyrite and pyrrhotite. A high grade assay of 15.23 g/t gold was intersected over 0.83 metres within a 7.02 metre interval grading 2.08 g/t gold in hole Dur-07-09, the easternmost hole drilled at Durette. The gold-bearing intersections (DUR-07-07, 08, 09 and 10) occur over a strike length of 225 metres and within 40 metres of surface and are open at depth and along strike. This zone is completely open to the east, where the Durette gold zone trends into a large, shallow lake and the conductor is continuous to the last line at lakeshore.

The offset portion of the Durette conductor continues for a further 1,500 metres to the west. This offset has not been tested by drilling and is largely covered by overburden. A separate discrete conductor, located 1 kilometre to the southwest of Durette is 900 metres in length and associated with previously reported surface gold values grading up to 9.5 g/t gold (2369) from prospecting samples.

Detailed re-mapping of the target areas and re-logging of core is planned for 2010 to confirm the main controls on gold mineralization in advance of a suitable and necessary follow-up drilling program.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

**Results of Operations**

***- Third Quarter Results***

During the quarter ended September 30, 2010, Commander's exploration activities focused primarily to the Baffin Island Gold Project, Nunavut and marketing Commander's portfolio projects to prospective partners or buyers. The mineral property expenditures on the Baffin Island Gold Project amounted to a total of \$2,594,855 (\$5,958,648 for the nine months ended September 30, 2010). These expenditures were then recovered from the advances provided by AngloGold. The largest mineral property expenditures during the quarter were the drilling costs of \$2,374,074 (\$5,061,776 for the nine months ended September 30, 2010) on the Qimmiq property of Baffin Island. Spending on other properties was \$17,342 (\$91,691 for nine months ended September 30, 2010). More information is available in Mineral Property Expenditure Table on page 13.

Commander incurred total general and administrative expenses of \$322,452 of which \$91,093 was non-cash stock-based compensation.

***- Nine months Ended September 30, 2010 compared with the Nine months Ended September 30, 2009***

Commander had no revenue for the nine months ended September 30, 2010. General and administrative expenses increased by \$614,263 to \$1,189,622 compared to \$575,359 in the same fiscal period in 2009 mostly because of a \$423,629 increase in non-cash stock-based compensation. Other notable changes include:

- Consulting expense of \$77,589 (2009 - \$27,388) increased by \$50,201 in the nine months ended September 30, 2010, mainly due to the costs associated with the senior management transition.
- Investor relations and promotion expense of \$133,229 increased from \$84,125 in 2009. Trade shows, media and other expenses increased during the nine months as follows:

	For the Three Months Ended		For the Nine Months Ended	
	September 30, 2010	September 30, 2009	September 30, 2010	September 30, 2009
Conferences and trade shows	\$ 9,446	\$ 10,540	\$ 42,980	\$ 23,109
Consulting, wages and benefits	16,400	16,357	49,208	49,113
Media	23,142	1,893	30,466	7,954
Administration	-	-	-	146
Promotion and advertising	3,974	662	10,575	3,803
<b>Total Investor Relations Expenses</b>	<b>\$ 52,962</b>	<b>\$ 29,452</b>	<b>\$ 133,229</b>	<b>\$ 84,125</b>

- Salaries and benefits expense increased to \$176,957 compared to \$126,727 in 2009 as a result of overlapping salaries due to senior management transition.
- Office and miscellaneous expenses were \$55,145 in the nine months ended September 30, 2010, compared to \$24,973 in 2009. The Company incurred additional expenses on computer maintenance this year.

For the nine months ended September 30, 2010, Commander's loss after tax was \$1,223,603 (2009 - \$427,407). The increase in loss was largely due to the increase in stock-based compensation \$534,265 (2009 - \$110,636) and future income tax recovery of \$Nil (2009 - \$617,589).

**Non-GAAP Financial Measures**

Since the adoption of the Canadian Institute of Chartered Accountants (“CICA”) accounting standard for stock-based compensation, Commander’s general and administrative quarterly expense has fluctuated significantly. The granting and vesting of stock options is at the discretion of the Board of Directors and the resulting expense does not reflect the normal operations of Commander. Commander has included “adjusted general and administrative expense” without the stock-based compensation expense to be more reflective of normal operations. This financial measure does not have any standardized meaning prescribed by Canadian generally accepted accounting principles (GAAP) and may not be comparable to similar measures presented by other corporations or entities.

**Liquidity**

At September 30, 2010, Commander had \$874,158 in cash and cash equivalents, of which \$314,664 was an advance from AngloGold for the Baffin Island project. The balance of cash available to Commander’s other projects and administration was \$559,494. Commander believes it has sufficient funds to complete the planned business objectives for 2010.

Commander has relied on equity financings to meet its cash requirements. In 2009, Commander’s Farm-in and Joint Venture Agreement with AngloGold created both immediate equity financing of \$1.2 million and funding of \$20 million in exploration expenditures by December 31, 2014. Although Commander has been successful in the past in obtaining financing through the sale of equity securities, there can be no assurance that Commander will be able to obtain adequate financing in the future or that the terms of such financings will be favourable.

**Capital Resources**

Commander terminated the option agreement with Lai Lai Chan pertaining to the Couteau Lake property in Newfoundland. There is no other significant commitment for capital expenditure.

**Off-Balance Sheet Arrangements**

Commander has not entered into any Off-Balance Sheet Arrangements.

**Related Party Transactions**

At September 30, 2010, marketable securities included 258,000 common shares of Diamonds North Resources Ltd., a company related by a director in common.

During the nine months ended September 30, 2010, Commander paid or accrued \$16,374 in legal fees, share issuances and mineral properties costs to a law firm in which a director of Commander is a partner. Of the legal fees, \$3,432 were still outstanding as at

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

September 30, 2010. During the nine months ended September 30, 2010, Commander paid or accrued \$60,075 in consulting fees to two companies controlled by two officers of Commander.

Given that Commander's directors and officers are engaged in a wide range of activities in the junior resource industry, Commander operates under the Conflict of Interest provisions found within the Business Corporations Act of British Columbia. In addition, management has adopted language from these provisions and incorporated them into Commander's Code of Business Conduct and Ethics.

Accounts Payable includes \$5,351 due to a company related by common directors and \$5,805 to an officer for expenses to be reimbursed. Related party transactions are recorded at the carrying amount and have no interest or stated terms of repayment.

**Proposed Transactions**

There was no proposed transactions.

**Critical Accounting Estimates**

The most significant accounting estimates for Commander relates to the carrying value of its mineral property assets. All deferred mineral property expenditures are reviewed, on a property-by-property basis, to consider whether there are any conditions that may indicate impairment. When the carrying value of a property exceeds its net recoverable amount that may be estimated by quantifiable evidence of an economic geological resource or reserve, joint venture expenditure commitments or Commander's assessment of its ability to sell the property for an amount exceeding the deferred costs, a provision is made for the impairment in value.

Management's estimates of exploration, operating, capital and reclamation costs are subject to certain risks and uncertainties which may affect the recoverability of mineral property costs. Although management has made its best estimate of these factors, it is possible that changes could occur in the near term that could adversely affect management's estimate of the net cash flow to be generated from its properties.

Another significant accounting estimate relates to accounting for stock-based compensation. Commander uses the Black-Scholes Option Pricing Model. Option pricing models require the input of highly subjective assumptions including the expected price volatility. Changes in the subjective input assumptions can materially affect the fair value estimate, and therefore the existing models do not necessarily provide a reliable single measure of the fair value of Commander's stock options granted/vested during the period.

**Adoption of New Accounting Policies**

The following are new CICA accounting standards that have been issued but not yet adopted by Commander:

(i) International Financial Reporting Standards ("IFRS")

In February 2008, the Canadian Accounting Standards Board announced that 2011 is the changeover date for publicly-listed companies to use IFRS, replacing Canada's own GAAP. The effective date for Commander is for interim and annual financial statements commencing January 1, 2011. The transition will require the restatement for comparative purposes of amounts reported by Commander for the year ended December 31, 2010. Commander has begun assessing the adoption of IFRS and a conversion plan has been established.

(ii) Business Combinations

In January 2009, the CICA issued Section 1582, "Business Combinations", Section 1601, "Consolidated Financial Statements", and Section 1602, "Non-Controlling Interests". These sections replace the former Section 1581, "Business Combinations", and Section 1600, "Consolidated Financial Statements", and establish a new section for accounting for a non-controlling interest in a subsidiary. Sections 1582 and 1602 will require net assets, non-controlling interests and goodwill acquired in a business combination to be recorded at fair value and non-controlling interests will be reported as a component of equity. Section 1601 establishes standards for the preparation of consolidated financial statements. These new sections apply to interim and annual financial statements relating to fiscal years beginning on or after January 1, 2011. As Commander has no business combinations, it is not expected that the adoption of these new policies to have a great impact on the Commander's financials.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

**Financial Instruments**

Commander is exposed to liquidity risk if it encounters difficulty in obtaining funds to meet commitments as they become due. As at September 30, 2010, Commander had cash and cash equivalent in the amount of \$874,158. Of this amount, \$314,664 related to advances from AngloGold to be spent on the Baffin Island projects. The balance of \$559,494 is available to the Company in order to meet short-term business requirements. Accounts payable and accrued liabilities as at September 30, 2010 amounted to \$400,963. Commander believes that it has sufficient funds to complete the planned business objectives for 2010.

Commander is exposed to credit risk with respect to its cash and cash equivalents and due from related parties. This risk is minimized as the cash and cash equivalents have been placed with major Canadian financial institutions. Commander is not exposed to credit risk on its receivables. Credit risk with respect to amounts due from related parties has been assessed as low by management as Commander has strong working relationships with the parties involved.

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. As at September 30, 2010, if the market prices of the marketable securities had decreased 10 percent with all other variables held constant, the net loss for the period would have been \$39,701 higher. Conversely, if the market prices of the marketable securities had increased 10 percent with all other variables held constant, the net loss for the period would have been \$39,702 lower.

The following table illustrates the classification of the Commander's financial instruments carried at fair value within the fair value hierarchy at September 30, 2010:

	<b>Total</b>	<b>Level 1</b>	<b>Level 2</b>	<b>Level 3</b>
Assets				
Marketable securities	\$ 363,965	\$ 363,965	\$ -	\$ -
Investment in warrants	\$ 33,043	\$ -	\$ 33,043	\$ -

**IFRS Conversion Plan**

Commander has begun the process of transitioning from Canadian GAAP to IFRS. It has established a project plan and allocated internal resources. It is in the process of evaluating its overall readiness to transition from GAAP to IFRS including the readiness of its staff, Board of Directors, Audit Committee and auditors. Commander is expected to complete the quantification of financial statement impacts by Q4 of 2010.

The IFRS convergence project consists of three primary phases, which in certain cases will occur concurrently as IFRS is applied to specific areas:

- Phase 1 – Initial Scoping and Impact Assessment Analysis: to isolate key areas that will be impacted by the transition to IFRS.
- Phase 2 – Evaluation and Design: to identify specific changes required to existing accounting policies, information systems and business processes, together with an analysis of policy alternatives allowed under IFRS and development of draft IFRS financial statements.
- Phase 3 – Implementation and Review: to execute the changes to information systems and business processes, completing formal authorization processes to approve recommended accounting policy changes and training programs across Commander's finance and other staff, as necessary. This will culminate in the collection of financial information necessary to compile IFRS compliant financial statements, including embedding IFRS principles in business processes, and Audit Committee review and approval of the financial statements.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

Commander had completed the initial scoping and impact assessment analysis phase. It is now in the evaluation and design phase. A number of differences in Canadian GAAP versus IFRS believed to be relevant to Commander had been identified. The main differences related to Commander's financial statements are summarized in the following table:

Items	IFRS	Canadian GAAP	Comments
Introduction	A statement of explicit and unreserved compliance required	Not required	To be incorporated
Financial Statements	Statement of changes in equity required	Not required	Already prepared by Commander
	Statement of financial position at the beginning of the earliest comparative period required	Not required	To be incorporated
Basis of Accounting	Modified historical cost with emphasis on fair value	Historical cost with limited use of fair value	To be observed
Changes in Accounting Policies	Statement of financial position at the beginning of the earliest comparative period required	Not required	To be incorporated
Events after Reporting Date	Post-reporting date to date statements authorized for issue	Post-reporting date to date of completion	To be observed
Statement of Financial Position	Deferred tax classified as non-current	Deferred tax classified as current or non-current based on underlying assets/liabilities	To be observed
PPE	Interest costs are capitalized	Interest costs may be capitalized	Not applicable
	Component is accounted for separately	Less strict on componentization	Not material in Commander's case
Joint Ventures	PPE may be revalued to fair value	PPE may not be revalued to fair value	To be observed
	Joint ventures to be accounted for by proportionate consolidation or equity method	Joint ventures must be accounted for using proportionate consolidation	To be observed
Impairment	The discount rate used is the market rate	Cash flows used to assess impairment is not discounted	To be observed
	Reversals of impairment are recognised	Reversals of impairment are prohibited	To be observed
Equity and Financial Liabilities	Impairment loss on a revalued asset is recognised in other comprehensive income	Impairment losses always recognised in profit or loss	To be observed
	Non-controlling interest classified within equity	Non-controlling interest classified outside equity	Not applicable
Income Taxes	A deferred tax asset is recognised to the extent it is probable that it will be realised	Deferred tax assets are recognised to the extent that it is "more likely than not" the the deferred tax assets will be realised	To be observed
	Deferred tax classified as non-current	Deferred taxes are classified as current and non-current based on the classification of the underlying assets or liabilities	To be observed
Profit or Loss	An analysis of expenses is required by nature or by function	Not required	To be observed
Share-based payments	Requirements for transactions with employees also applied to non-employees	Requirements for transactions with employees not applied to non-employees	To be adjusted
	Share-based payments to non-employees based on fair value of goods or services. Fair value of instruments used only when fair value of goods or services cannot be measured reliably	Stock-based payments to non-employees based on more reliable of fair value of good or services or instruments	To be observed
	In graded vesting each instalment is accounted for as a separate grant	Entity can elect to determine the fair value using the average life of the instrument	Graded vesting per IFRS started from 2010. Adjustments for previous years may be required
Related parties	Related party relationships are symmetrical	Related party relationship not symmetrical	To be observed
	Key management personnel compensation is disclosed in total and is analysed by component	Not required	To be incorporated
Mineral Resources	IFRS 6 deals with exploration and evaluation of mineral resources	No single standard for exploration and evaluation activities	To be observed
	Identify and account for pre-exploration, E&E and development expenditure required	Not required	Commander does not capitalize pre-exploration expenditure and no property is at the development stage yet
	Generally pre-license costs are expensed	Pre-license costs may be capitalised	Commander does not capitalize pre-licensed costs
	Capitalised E&E costs are classified as either tangible or intangible assets	Not required	All E&E costs in Commander's mineral properties are intangible
	Test for recoverability can combine several cash generating unites	Test for recoverability cannot combine several cash generating unites	To be observed
	Reversals of impairment are permitted	Reversals of impairment are prohibited	To be observed
	No guidance on pre-exploration costs or post-exploration development expenditure	Guidance provided	To be observed

**First-time Adoption of International Financial Reporting Standards**

IFRS 1, *First-time Adoption of International Financial Reporting Standards* ("IFRS 1"), sets forth guidance for the initial adoption of IFRS. Commencing for the period ended March 31, 2011, Commander will restate its comparative fiscal 2010 financial statements for annual and interim periods to be consistent with IFRS. In addition, Commander will reconcile equity and net earnings from the previously reported fiscal 2010 GAAP amounts to the restated 2010 IFRS amounts.

IFRS generally requires that first-time adopters retrospectively apply all IFRS standards and interpretations in effect as at the first annual reporting date. IFRS 1 provides for certain mandatory exceptions and optional exemptions to this general principle.

Commander anticipates using the following IFRS 1 optional exemptions:

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

- to apply the requirements of IFRS 3, *Business Combinations*, prospectively from the Transition Date;
- to apply the requirements of IFRS 2, *Share-based Payments*, to equity instruments granted which had not vested as of the Transition Date;
- to apply the borrowing cost exemption and apply IAS 23, *Borrowing Costs*, prospectively from the Transition Date; and
- to elect not to comply with IFRIC 1, *Changes in Existing Decommissioning, Restoration and Similar Liabilities*, for changes in such liabilities that occurred before the Transition Date.

Changes to estimates previously made are not permitted. The estimates previously made by Commander under GAAP will not be revised for application of IFRS except where necessary to reflect any changes resulting from differences in accounting policies.

**Impact of Adoption of IFRS on Financial Reporting**

While GAAP is in many respects similar to IFRS, conversion will result in differences in recognition, measurement, and disclosure in the financial statements. Based on a high-level scoping assessment, the following financial statement areas are expected to be significantly impacted:

**Property, Plant and Equipment (PP&E)**

Under IAS 16, *Property, Plant and Equipment*, are recognized initially at cost if it is probable that future economic benefits associated with the item will flow to the entity and the cost of the item can be measured reliably. Costs include all expenditures directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Under IAS 16, each part of an item of PP&E with a cost that is significant in relation to the total cost of the item shall be depreciated separately. In order to meet this requirement, componentization is generally required. Commander does not currently componentize to the same level as would be required under IFRS. Componentization would be required only to the extent that different depreciation methods or rates are appropriate and those components are material. In addition major inspections or overhaul costs are identified and accounted for as a separate component under IFRS if that component is used for more than one period. Commander does not currently have a policy for major overhaul costs. Practically, this should be factored into the determination of the components of PP&E.

**Income Taxes**

IAS 12, *Income Taxes*, requires the recognition of deferred tax assets or liabilities for all deductible and taxable temporary differences except for temporary differences created in a transaction that is:

- (a) not a business combination and
- (b) at the time of the transaction, affects neither accounting profit nor taxable profit.

A deferred tax asset is recognized to the extent it is probable that taxable profit will be available against which the deductible temporary differences can be utilized. Under GAAP, tax assets are recognized if it is more likely than not. Probable is not defined in IAS 12. However, entities have often used a definition of more likely than not similar to GAAP. However, IAS 12 does not preclude a higher threshold. Accordingly, a difference will not result as long as Commander uses more likely than not as its definition of probable.

**Impairment of Assets**

Per IAS 36, *Impairment of Assets*, an entity shall assess at the end of each reporting period whether there is any indication that an asset may be impaired. If any such indication exists, the entity should estimate the recoverable amount of the asset. The indicators of impairment are generally consistent with those of GAAP. An asset should be written down to its recoverable amount if the recoverable amount is less than its carrying value.

The recoverable amount is equal to the higher of the fair value less cost to sell and its value in use. It is not necessary to determine both if one indicates no impairment exists. The value in use is based on a discounted cash flow model. This approach is different than GAAP (i.e. one step model under IFRS compared to two step model under GAAP). To the extent possible, individual assets should be tested for impairment. However, if it is not possible to determine the recoverable amount of an individual asset, an entity should determine the recoverable amount of the Cash Generating Unit (“CGU”) to which the asset belongs. The definition of a CGU is different from the Canadian definition of an Asset Group.

**Commander Resources Ltd.**  
**Management Discussion and Analysis**  
For the Nine Months Ended September 30, 2010

---

In addition, Commander has in the past written down mineral property amounts for certain mineral properties. Under IAS 36, Commander would be required to reconsider whether there is any indication that an impairment loss recognized in a prior period may no longer exist or has decreased on transition and thereafter on an annual basis. If such indicators exist, a new recoverable amount should be calculated and all or part of the impairment charge should be reversed to the extent the recoverable amount exceeds its carrying value. This is different than GAAP where write ups are not permitted.

**Asset Retirement Obligations (“ARO”)**

Under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*, an ARO is recognized when there is a legal or constructive obligation to restore a site for damage that has already occurred, it is probable a restoration expense will be incurred and the cost can be estimated reliably. This is different than GAAP where only legal obligations are considered. Cost includes the cost of dismantling and removing items and restoring the site on which it is located, the obligation for which is incurred either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories. This is different from GAAP where all change in ARO are recognized as a cost of the related asset. Under IFRS, the amount recognized as a provision shall be the best estimate of the expenditures required to settle the present obligation. This is significantly different from GAAP where third party costs are required. Under IAS 37, the provision would be based on management’s best estimate. This estimate could be a third party cost if it is management’s intention to hire a third party to complete the work or an internal estimate of the cost if Commander intends to use its own equipment and resources to do this work.

Where the effect of the time value of money is material, the amount of the provision should be the present value of the expenditures expected to be required to settle the obligation. This is consistent with GAAP. However, the discount rate used would be a pre-tax rate specific to the liability rather than Commander's credit adjusted risk free rate and should not reflect risks for which the future cash flow estimates have been adjusted. Unwinding of the discount (i.e. accretion) is included in finance costs.

The ARO provision should be reviewed at the end of each reporting period and adjusted to reflect the current best estimate. Changes may result from changes in the amount or timing of the cash out flows or changes in discount rates. This is different from GAAP where changes in discount rates alone would not result in a change in the ARO. Accordingly, Commander will need to assess the discount rate applicable to the ARO on an ongoing basis.

**IFRS Impact on Our Organization**

The conversion to IFRS will impact the way Commander presents its financial results. The first financial statements prepared using IFRS (i.e. interim financial statements for the three months ended March 31, 2011) will be required to include numerous notes disclosing extensive transitional information and full disclosure of all new IFRS accounting policies.

Commander has obtained an understanding of IFRS from training of its finance personnel and had evaluated the impact of the conversion on its accounting systems. Commander expects that the impact of the conversion on its accounting systems is minimal.

In addition, Commander will evaluate its internal and disclosure control processes as a result of its conversion to IFRS, assess the impacts of adopting IFRS on its contractual arrangements to identify any material compliance issues such as its debt covenants and other commitments and consider the impacts the transition will have on its internal planning process and compensation arrangements. Commander expects to complete this evaluation by Q4 of 2010.
